## Factors influencing the use of antenatal care in rural West Sumatra, Indonesia

Yenita Agus<sup>1,2\*</sup> and Shigeko Horiuchi<sup>1†</sup>

**Abstract**

**Background:** Every year, nearly half a million women and girls needlessly die as a result of complications during pregnancy, childbirth or the 6 weeks following delivery. Almost all (99%) of these deaths occur in developing countries. The study aim was to describe the factors related to low visits for antenatal care (ANC) services among pregnant women in Indonesia.

**Method:** A total of 145 of 200 married women of reproductive age who were pregnant or had experienced birth responded to the questionnaire about their ANC visits. We developed a questionnaire containing 35 items and four sections. Section one and two included the women's socio demographics, section three about basic knowledge of pregnancy and section four contained two subsections about preferences about midwives and preferences about Traditional Birth Attendant (TBA) and the second subsections were traditional beliefs. Data were collected using a convenience sampling strategy during July and August 2010, from 10 villages in the *Tanjung Emas*. Multiple regression analysis was used for preference for types of providers.

**Results:** Three-quarter of respondents (77.9%) received ANC more than four times. The other 22.1% received ANC less than four times. 59.4% received ANC visits during pregnancy, which was statistically significant compared to multiparous ( $p = 0.001$ ). Women who were encouraged by their family to receive ANC had statistically significant higher traditional belief scores compared to those who encouraged themselves ( $p = 0.003$ ). Preference for TBAs was most strongly affected by traditional beliefs ( $p < 0.001$ ). On the contrary, preference for midwives was negatively correlated with traditional beliefs ( $p < 0.001$ ).

**Conclusions:** Parity was the factor influencing women's receiving less than the recommended four ANC visits

Judul	Pengetahuan asuhan kebidanan dan hubungannya dengan keadaan awal mahasiswa akademi kebidanan Depkes Medan T.A 1999/2000
Pengarang	Yusrawaty Hasibuan
Subjek	Midwives
Abstrak	<p>Akademi Kebidanan sebagai institusi pendidikan bertujuan untuk menghasilkan lulusan yang memiliki integritas kepribadian yang tinggi sebagai bidan profesional yang bertakwa kepada Tuhan Yang Maha Esa, tanggap terhadap perubahan kemajuan iptek dan masalah yang dihadapi masyarakat khususnya yang berkaitan dengan kebidanan. Dalam rangka mengemban tugasnya dimasa mendatang mahasiswa dibekali mata kuliah keahlian diantaranya Asuhan Kebidanan Pada Ibu.</p> <p>Hasil Ujian jenjang Akhir Program mahasiswa Akademi Kebidanan Depkes Medan tahun 2000 relatif rendah yaitu dari 38 orang peserta hanya 6 orang (15,79 %) yang tidak mengulang dan belum diketahui hubungan keadaan awal mahasiswa dengan pengetahuan Asuhan Kebidanan.</p> <p>Penelitian bertujuan untuk memperoleh informasi mengenai hubungan pengetahuan Asuhan Kebidanan dengan keadaan awal mahasiswa Akademi Kebidanan Depkes Medan tahun ajaran 1999/2000.</p> <p>Rancangan penelitian yang digunakan adalah cross sectional, dengan populasi seluruh mahasiswa Akbid Depkes Medan, dan populasi target seluruh mahasiswa yang telah menyelesaikan semester IV, tahun ajaran 1999/2000 sejumlah 176 orang. Analisis yang digunakan adalah univariat, bivariat (regresi Tinier sederhana) dan multivariat.</p> <p>Hasil peneliti memperlihatkan sebaran data adalah normal, tidak terdapat peningkatan rata-rata semester III dan semester IV serta variasi cukup besar. Rata-rata pengetahuan Asuhan Kebidanan lebih tinggi pada mahasiswa latar belakang pendidikan SMU dibandingkan latar belakang pendidikan SPK/PPBidan. Analisis bivariat memperlihatkan hubungan yang positif antara pengetahuan awal (nilai tes) dengan pengetahuan Asuhan Kebidanan, sedangkan pengalaman bekerja memperlihatkan hubungan yang terbalik. Hasil uji model fit menunjukkan variabel independen yang dapat memprediksi pengetahuan Asuhan Kebidanan adalah pengetahuan awal, latar belakang pendidikan dan motivasi belajar serta diantara ketiganya yang paling besar perannya adalah latar belakang pendidikan (SMCJ). Model regresi yang diperoleh hanya 50,9 % dapat menjelaskan variasi pengetahuan Asuhan Kebidanan mahasiswa Akademi Kebidanan Depkes Medan.</p> <p>Berdasarkan hasil ini agar pihak penyelenggara mempertimbangkan latar belakang pendidikan calon mahasiswa dan mengkaji ulang metode mengajar yang telah dilaksanakan memberikan penbinaan pada mahasiswa yang berprestasi.</p>
